

Discover total control of your workstations, whatever their type, their configuration, their use, whatever your organization or technical architecture, whatever your needs and for all of your software.

With DotRiver, office software is: Mobile:

You are totally free to choose any terminal you wish (PC, Mac, Solaris..., with or without a hard drive, netbooks, network computers, out of date or reconditioned materials...), everything you need is on the DotRiver Server of your choice, located wherever you want (in your offices, an outsourcing partner, a data center...).

Connected:

From any position on the planet, you can hook up to your familiar and fully functional workspace, which appears exactly as you left it last time you used it (desktop configuration, files, software, windows, opened files...).

Secure:

No data is stored or changed locally. No data is transferred over the Internet or the LAN/WAN connection. There is no risk of lost data if your PC is lost or stolen. Connexions are encrypted with SSH-X 128 bits. Anti-virus, anti-spyware, snort, URL filtering... You exercise full control of your information security with one single point of control.

Managed:

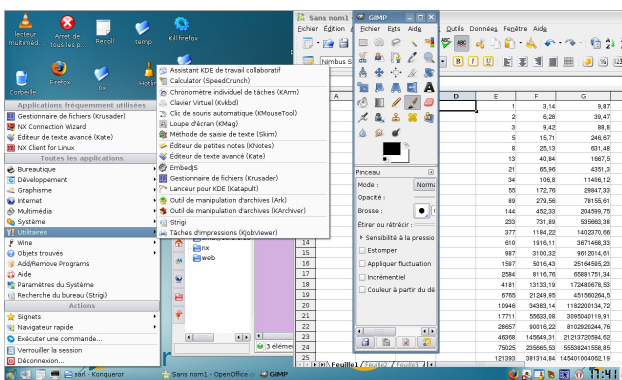

DotRiver manages supervision, security, backup, software updates... and guarantees you full availability at all times.

Economical, with managed costs:

Your office software is no longer dependent on changes made to software versions or operating systems, so you can schedule upgrades and replacements far less frequently. On-site interventions for hardware problems are no longer required. You reduce your electricity bills. You save on software purchases¹ (though you can continue to use any licensed software you choose). Users gain in productivity, you have permanent and guaranteed technical support.

Cost reductions experienced by DotRiver customers (confirmed by independent surveys) are in the range of 50 to 90%, while improving your quality of service (QoS) and offering new possibilities to your users: New Desktop experience.

A DotRiver Desktop (no local OS needed)

Our Offers:

GridRiver and DeskRiver: Consolidation, Outsourcing

Profit from the high power of our consolidated servers to run your office software. Forget those minor (or major) worries of day to day information system management.

¹ Ask us for our TCO calculation tools.

GridRiver is a packaged outsourced office software solution for small and medium businesses, organizations and associations, with guaranteed availability and service for all your office software needs, whatever workstations used.

Deskriver is a single-user package for the self-employed and professionals - artisans, lawyers, architects...

OfficeRiver: Dedicated DotRiver Server Solutions

Everything DotRiver has to offer, on a server (or cluster) dedicated exclusively to your organization. You choose the physical location, we manage all OfficeRiver supervision and administration tasks. You benefit immediately from changes or extensions to DotRiver, and you have full control over your processing power requirements.

Complementary DotRiver Services:

Besides our guarantee of permanent and flawless operations for your office software, DotRiver offers:

- evaluation of opportunity; audits to determine the TCO of your office software; assistance for your change management; BRP/BCP.
- communication and support during your project: assistance, training, consultancy and coaching for users and administrators.
- assistance in your choice of IT architecture/infrastructure.

Some Technical Aspects:

Work is fully collaborative, files and applications are always available and up to date, upgrades for all users are instant, multi-site and language management are simplified, and the BRP/BCP for your office software is an integral part of DotRiver. DotRiver runs on all server platforms and uses minimal bandwidth (less than 30kb/s). Reporting is automatic and you can choose from over 10.000 software applications.

DotRiver, Green-IT Office Software.

Besides the technological, practical and financial aspects, DotRiver also addresses the ecological problems created by the ever-increasing use of computers. The best recycling is not having to recycle! Three major elements:

1. Installing DotRiver requires no changes to your stock of PCs, and integrates seamlessly with your present-day IT environment;
2. With DotRiver you keep your workstation terminals until the end of their electronic life (10-15 years or more), when they can be replaced with the most ultra-lightweight client terminals available.
3. Using light terminals you save up to 80 % on energy

ADEME, the French government agency for energy saving and ecology supports DotRiver for our eco-innovative solutions.
